

AISHWARYA NAYAK

AI Engineer | Generative AI | LLMs | Agentic AI

Bengaluru, India | +91 8989438322 | ashnayakwork@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

AI Engineer with 5+ years of software engineering experience, including 2+ years of hands-on experience in Generative AI, LLM applications, Agentic AI, and AI evaluation, with experience building AI-powered applications and evaluating LLM-generated code, reasoning, and coding-agent outputs. Skilled in Python, FastAPI, LangChain, LangGraph, Docker, Vertex AI, Gemini, and cloud platforms, with a strong foundation in backend systems, APIs, microservices, and distributed systems.

SKILLS

Generative AI & LLMs: Generative AI, Large Language Models (LLMs), Agentic AI, AI Agents, Retrieval-Augmented Generation (RAG), Prompt Engineering, Tool Calling, Multi-Agent Workflows, LLM Evaluation, AI Benchmarking, Multimodal AI, OpenAI API, Gemini API

AI Engineering: LangChain, LangGraph, Benchmark Engineering, Automated Testing, Regression Testing, Model Output Evaluation

Programming: Python, Java, Scala, JavaScript, TypeScript, SQL

Backend & APIs: FastAPI, REST APIs, Microservices, Distributed Systems, Event-Driven Architecture

Cloud & Infrastructure: Docker, Kubernetes, Git, GitHub Actions, Jenkins, AWS, Google Cloud Platform (GCP), CI/CD, Linux

Databases & Tools: MySQL, ChromaDB, Apache Solr, Apache Kafka, Harbor

WORK EXPERIENCE

Handshake AI — AI Engineer (LLM Evaluation & Benchmarking) | Remote (USA) **Sep 2025 – Aug 2026**

- Created 200+ benchmark tasks for coding, reasoning, multimodal, and software engineering evaluation, defining task requirements and evaluation criteria for consistent assessment of LLM performance.
- Built Docker-based evaluation environments and pytest test suites for LLM-generated code, enabling consistent and reproducible validation across software engineering benchmark tasks.
- Designed fail-to-pass (F2P) and pass-to-pass (P2P) test cases to verify that AI-generated code implemented required changes while preserving existing functionality.
- Evaluated 1,000+ LLM-generated code and reasoning outputs across multiple programming languages, identifying functional errors, logical issues, incorrect outputs, and failures to follow task requirements.
- Worked across 8+ AI evaluation projects involving LLM benchmarking, coding-agent evaluation, multimodal evaluation, reasoning and ideation assessment, regression testing, and software engineering benchmarks.
- Developed and packaged benchmark tasks using Python, Docker, Git, Linux, pytest, JSON/TOML, and Harbor, including task specifications, test cases, evaluation metadata, and execution environments.

Reality AI Lab — Generative AI Engineer | Buffalo, New York, USA **Mar 2025 – Sep 2025**

- Developed AI-powered presentation generation capabilities for MarvelAI using Google Vertex AI and Gemini 1.5, transforming user inputs into structured presentation outlines and AI-generated instructional content.
- Built FastAPI-based backend services and REST APIs to integrate Vertex AI capabilities into the presentation generation workflow and support scalable AI application development.
- Developed frontend components using React, Next.js, and Material UI, integrating AI-powered backend services into the user-facing presentation generation workflow.
- Designed and tested dynamic slide-generation templates and evaluated generated content for relevance, consistency, and layout quality, improving the overall quality of AI-generated presentations.

Mocapay — Software Engineer, Backend | Delhi, India **Aug 2021 – Jun 2023**

- Developed and maintained Scala-based microservices and REST APIs supporting fintech products generating \$10M+ in annual revenue, handling high-volume transaction processing and backend workflows.
- Built Apache Kafka-based event-driven workflows and integrated Apache Solr search capabilities, improving system scalability, real-time communication, and search efficiency by 25%.
- Automated deployment and release workflows using Jenkins and Docker, accelerating release cycles by 30% while following engineering practices aligned with SOC 2 compliance.

Tata Consultancy Services (TCS) — Software Engineer, Backend | Indore, India **Jan 2020 – Jul 2021**

- Developed backend services and REST APIs for enterprise financial platforms managing 1,000+ active contracts, supporting contract lifecycle management and payment processing workflows.
- Optimized cloud infrastructure and SQL workloads across AWS and Google Cloud Platform (GCP), reducing infrastructure costs by 15% and improving database performance by 20%.
- Automated CI/CD pipelines using Jenkins and implemented secure development practices with Fortify and SonarQube, improving software delivery and application security.

EDUCATION

Master of Science (MS) in Data Science **Aug 2023 - Feb 2025**
University at Buffalo (State University of New York, SUNY Buffalo) New York, US

Bachelor of Technology (B.Tech) in Electronics and Telecom Engineering **Jul 2015 - Apr 2019**
Symbiosis International University Pune, IN
