Professional Summary

AI Evaluation Engineer with 5+ years of software engineering experience, specialising in benchmark engineering and the reliability of AI systems. I design and validate benchmarks for AI coding agents, with reference solutions, fail-to-pass and pass-to-pass test suites and reproducible Docker environments, backed by a strong foundation in backend engineering.

Skills

AI Evaluation	Benchmark Engineering, LLM & Coding-Agent Evaluation, Terminal-Bench, Harbor, Rubric-Based Evaluation, Model Failure Analysis, Model Validation, Regression Testing
AI & LLMs	Large Language Models, AI Agents, Prompt Engineering, Tool Calling, Vertex AI, Gemini API, OpenAI API, LangChain, LangGraph
Engineering	Python, Java, Scala, SQL, TypeScript, pytest, TDD, FastAPI, REST APIs, Microservices, Kafka, Solr
Infrastructure	Docker, Linux, Git, GitHub Actions, Jenkins, AWS, GCP, MySQL, ChromaDB

Work Experience

Handshake AI | Remote — Sep 2025 – Present

Across both roles: 200+ benchmark tasks created, 1,000+ AI outputs evaluated, 8+ evaluation projects.

AI Evaluation Engineer, Software Engineering Benchmarking — *May 2026 – Present*

- Develop repository-level software engineering tasks (bug fixes, feature implementation, multi-step debugging) to evaluate AI coding agents on real-world problems, including selected Terminal-Bench 2 and Terminal-Bench 3 tasks.
- Implement reference solutions and patches, and design fail-to-pass (F2P) and pass-to-pass (P2P) test suites that verify fixes and detect regressions.
- Configure isolated, reproducible environments with Docker, Linux, Git and Harbor; investigate test failures, edge cases and ambiguous requirements to improve benchmark reliability.

AI Evaluation Engineer (Contract) — *Sep 2025 – Apr 2026*

- Evaluated LLM-generated code across multiple languages in isolated Docker environments, checking execution results, correctness, edge cases and adherence to task requirements.
- Analysed AI agent ideation traces for alignment with task objectives, identifying data leakage, metric manipulation and inconsistencies between proposed plans and actual actions.
- Assessed ML approaches on feasibility, complexity, novelty and impact using structured rubrics.

Reality AI Lab | Remote, USA — Mar 2025 – Sep 2025

Generative AI Engineer (Part-time)

- Developed presentation generation for MarvelAI with Google Vertex AI and Gemini 1.5, turning user inputs into structured slide content.
- Built REST APIs and backend workflows with Python and FastAPI, and contributed to a React and Next.js prototype.
- Evaluated generated presentations for relevance, consistency, logical flow and layout quality.

Mocapay | Remote, India — Aug 2021 – Jun 2023

Software Engineer

- Built and maintained Scala/Java microservices and REST APIs for fintech products generating $10M+ in annual revenue, using Apache Kafka for event-driven processing.
- Improved search efficiency by 25% with Apache Solr, and reduced deployment time by 30% by automating builds with Jenkins and Docker, following SOC 2-aligned practices.
- Applied test-driven development, mentored junior developers on testing practices, and reviewed pull requests.

Tata Consultancy Services (TCS) | Hybrid, India — Jan 2020 – Jul 2021

Software Engineer

- Developed backend functionality with Java, SQL and AngularJS for financial platforms with 1,000+ client contracts.
- Optimised SQL queries to improve application performance, used SonarQube and Fortify to catch code-quality and security issues, and supported Jenkins CI/CD workflows.

Education

MS in Data Science, University at Buffalo (SUNY), New York, USA | GPA: 3.5/4 — Aug 2023 – Feb 2025

B.Tech in Electronics & Telecom, Symbiosis International University, Pune | CGPA: 8.65/10 — Jul 2015 – Apr 2019
